Acknowledgments

This index was made possible with the help and support of many stake holders. We wish to acknowledge the following specifically:

1. Minister of Public Health Mr. Wael Abou Faour and Director General Dr. Walid Ammar.
2. Ministry of Public Health staff in the Pharmacy Service headed by Dr. Colette Raidy.
3. Dr. Myriam Watfa who helped in revision of data.

Disclaimer

The classification of medicines in this index does not imply any recommendation for indication or methodology of use. Listings are current as of December 2014 and have been as true to the original documents submitted by the pharmaceutical industry as possible. The editors and the Ministry of Public Health teams are not responsible for any errors or loss resulting from the use of information herein for medical, financial or other decisions. Readers are advised to keep abreast of revised recommendations and classifications, particularly those concerning newer products.

Resale, redistribution, or transmission in any form or by any means (electronic, mechanical, photocopying or otherwise) without the prior written permission of the Ministry of Public Health of Lebanon, is not permitted.

Preface

Pharmaceutical products, more commonly known as medicines, are according to the World Health Organization a fundamental component of both modern and traditional medicine. It is essential that such products are safe, effective and prescribed rationally.

The abundance of available products has made it rather challenging for providers of care to keep up with the market.

In this regard, the Lebanese Ministry of Public Health conceived the first edition of the Lebanon National Drug Index in 2007. It did not aim to avail indications for use, adverse reactions or interactions of products. The Lebanon National Drug Index is simply a verified listing and classification of available products in the Lebanese market. It became over editions a Reference for all drug distributors, drug manufacturers, healthcare professionals who participate in the distribution and prescription of drugs. It is used in order to keep up with the available products in the market.

The Ministry of Public Health has released the 2015 version. This new edition of Lebanon National Drug Index 2015 provides user-friendly updated information about all registered medicines in Lebanon.

This new edition can be accessed from the official website of the Ministry of Public Health: www.moph.gov.lb

Foreword

The present Index has been compiled by a team of pharmacists from the Ministry of Public Health and verified by Professors of Pharmacy and Medicine from the various Universities in Lebanon. The help and contribution of Manufacturers and Distributors representatives in Lebanon was instrumental in ensuring the comprehensiveness of this document.

This Index is divided into two sections that facilitate retrieval of information easily and efficiently.

Section 1 is a listing of drugs, dosage forms, package sizes, and drug strengths registered at the Ministry of Public Health. It is divided into parts based on the Anatomical Therapeutic Chemical (ATC) classification system. This classification is mostly used for research purposes but can be quite helpful to pharmacists and other health workers. It allows them to scan through groups of medications often intended for the same therapeutic use without difficulty.

This information is shown in a convenient format with administrative and trade information shown in italics:

ATC code							F=	NSSF =
Trade Name & Strength		Price in Lebanese Pounds			B=Brand G=Generic	Needs refrigeration	Included on the NSSF list	
Route	Form	Container	Presentation	<i>Code MOPH</i>	<i>Registration Number at MOPH</i>			
Active Ingredients with their respective dosage								
<i>Agent importing product</i>			<i>Manufacturer</i>	<i>Country of Origin</i>				
			<i>Responsible Party</i>	<i>Country of Responsible Party</i>				

Each medication listing in this section contains the following information:

- ATC classification and code.
- Trade name and strength of the formulation as registered at the Ministry of Public Health (MOH)
- Form & presentation.
- Composition of the marketed form with the corresponding dosage of each active ingredient.
- The local importer (agent) and manufacturer and identified country of origin.
- The Responsible Party and identified country
- The Ministry of Public Health database serial number (Code MOH) and legal registration document number (MOH reg)
- Useful drug information:
 - Generic (G) or original Branded product (B)
 - Coverage by National Social Security Fund (NSSF)
 - Need for refrigeration (F)
 - Public Price of each product in Lebanese pound (LL) based on the exchange rates on december 17, 2014. For an up to date price, check the MOH website: (www.moph.gov.lb).

Section 2 is an index by Brand and Ingredient.

The ATC classification system

The Anatomical Therapeutic Chemical Classification System (ATC) is used for the classification of medications. It is controlled by the WHO Collaborating Centre for Drug Statistics Methodology in Norway, and was first published in 1976. It is described here for the convenience of the users. This description can be found in more detail at http://www.whocc.no/atc_ddd_index/

We attempted to assign an ATC code for every product in the Lebanese market. However, we were able to find the full ATC of few products. These were listed under the 3rd or 4th level of ATC classification to the best of our knowledge.

ATC classifies medicines into groups according to the organ or system on which they act and/or their therapeutic and chemical characteristics. It uses 5 levels coding.

First level

The first level of the code is based on a letter for the anatomical group and consists of one letter; there are 14 main groups:

A	Alimentary tract and metabolism
B	Blood and blood forming organs
C	Cardiovascular system
D	Dermatologicals
G	Genito-urinary system and sex hormones
H	Systemic hormonal preparations, excluding sex hormones and insulins
J	Anti-infectives for systemic use
L	Antineoplastic and immunomodulating agents
M	Musculo-skeletal system
N	Nervous system
P	Antiparasitic products, insecticides and repellents
R	Respiratory system
S	Sensory organs
V	Various

Second level

The second level of the code is based on the therapeutic main group and consists of two digits.

Third level

The third level of the code is based on the therapeutic/pharmacological subgroup and consists of one letter.

Fourth level

The fourth level of the code is based on the chemical/therapeutic/pharmacological subgroup and consists of one letter.

Fifth level

The fifth level of the code is based on the chemical substance subgroup and consists of two digits.

For example, Metformin is assigned ATC code A10BA02:

- A: Alimentary tract and metabolism
(1st level, anatomical main group)
- A10: Drugs used in diabetes
(2nd level, therapeutic subgroup)
- A10B: Oral blood glucose lowering drugs
(3rd level, pharmacological subgroup)
- A10BA: Biguanides
(4th level, chemical subgroup)
- A10BA02: Metformin
(5th level, chemical substance)

The ATC code for a medicinal product may change, for example if the primary indication for the substance is altered.

The Lebanon National Drug Index welcomes comments from healthcare professionals; such comments help to ensure that the Lebanon National Drug Index remains relevant to practice. Please send comments to: ritakmouawad@hotmail.com or dianacharbel@gmail.com.
